

Replace with Research Note Title

Replace with Author
Replace with Affiliation
Project repository

Abstract. Replace this paragraph with 3-5 sentences: what you tested, how you tested it, what you found, and what remains uncertain.

1. Background and Motivation

Explain why this small experiment is worth doing. Keep the tone honest: this is a research note, not a finished conference paper.

2. Experiment Design

Describe:

- prompts or tasks,
- models and versions,
- scoring dimensions,
- any human or model-assisted judging,
- data release details.

3. Results

Put the main observations here. Prefer concrete tables, examples, and failure cases over broad claims.

Model	Warmth	Caution	Sycophancy
Model A	0.62	0.71	0.34
Model B	0.48	0.83	0.21

Table 1: Example result table. Replace with real outputs.

4. Limitations

List what this note does **not** prove. Mention sample size, prompt bias, model version drift, scoring subjectivity, and any missing baselines.

5. Discussion

Explain what seems interesting enough for other people to critique or extend.

6. References

Add references in `refs.bib` and cite them here when needed.
